13.WORKING WITH TRIGGER

Program 1

Write a code in PL/SQL to develop a trigger that enforces referential integrity by preventing the deletion of a parent record if child records exist.

```
CREATE OR REPLACE TRIGGER prevent_parent_deletion
BEFORE DELETE ON employees
FOR EACH ROW
DECLARE     pl_dept_count NUMBER;
BEGIN SELECT
COUNT(*)
   INTO pl_dept_count
   FROM department
   WHERE dept_id = :OLD.employee_id;
   IF pl_dept_count > 0 THEN
      RAISE_APPLICATION_ERROR(-20001, 'Cannot delete employee record as  department
records exist.'); END IF;
END;
```

```
DELETE FROM employees
WHERE employee_id = 70;
```

Program 2

Write a code in PL/SQL to create a trigger that checks for duplicate values in a specific column and raises an exception if found.

```
CREATE OR REPLACE TRIGGER prevent_duplicate_manager_id
BEFORE INSERT OR UPDATE ON employees
FOR EACH ROW
DECLARE     pl_count
NUMBER; BEGIN
   SELECT COUNT(*)
   INTO pl_count
   FROM employees
   WHERE manager_id = :NEW.manager_id AND employee_id
   != :NEW.employee_id;
   IF pl_count > 0 THEN
      RAISE_APPLICATION_ERROR(-20003, 'Duplicate manager_id found: ' ||
:NEW.manager_id); END
   IF;
END;
INSERT INTO employees (employee_id, first_name, last_name, email, phone_number,
hire_date, job_id, salary, commission_pct, manager_id, department_id)
VALUES (202, 'Jane', 'Smith',
'john006@gmail.com',7383922241,'11/9/2000','ST_CLERK',10000,0.15,400,80);
```

Program 3

Write a code in PL/SQL to create a trigger that restricts the insertion of new rows if the total of a column's values exceeds a certain threshold.

```
CREATE OR REPLACE TRIGGER restrict_salary_insertion
BEFORE INSERT ON employees
FOR EACH ROW
DECLARE  total_salary NUMBER; threshold
   NUMBER
:= 100000; BEGIN

   SELECT SUM(salary)
   INTO total_salary
   FROM employees;
   IF (total_salary + :NEW.salary) > threshold THEN
       RAISE_APPLICATION_ERROR(-20004, 'Insertion denied: Total salary exceeds the
threshold of ' || threshold); END IF;
END;
INSERT INTO employees (employee_id, first_name, last_name, email, phone_number,
hire_date, job_id, salary, commission_pct, manager_id, department_id)
```

VALUES (203, 'Charlie', 'Brown', 'charlie203@gmail.com', '9122334455','03/01/2021', '#cb203', 5000, 0.20, 1000, 50);

Program 4

Write a code in PL/SQL to design a trigger that captures changes made to specific columns and logs them in an audit table.

```
CREATE OR REPLACE TRIGGER audit_changes
AFTER UPDATE OF salary, job_id ON employees
FOR EACH ROW
BEGIN
   IF :OLD.salary != :NEW.salary OR :OLD.job_id != :NEW.job_id THEN
      INSERT INTO employee_audit ( employee_id,  old_salary,
```
